classUtilities

This class provides static methods to support minor transformation tasks through the ELT process.

Methods available within the class are as defined below:

Method Name	Description	Arguements	Input	Output
lowerCamelCase	Converts a string to lower camel case format (lowerCamelCase)	stringInput	classUtilities.stringInput("This_is_a_test")	thisIsATest
nvl	Provides a python version of the ANSI SQL NVL function, if the first arguement is not null, it will be returned, otherwise, the second arguement is returned.	arguementOne, arguementTwo	myFirstVariable = "var1" mySecondVariable = "var2" classUtilities.nvl(myFirstVariable, mySecondVariable)	mySecondVariable (var2)
getTableSid	Returns the table sid name based on the table name	deltaTableName	classUtilities.getTableSid(dimTemplate)	templateSid
