

Databricks logging Scala

Last updated by | Wesley Boyd | Jul 23, 2019 at 1:39 PM GMT+1

Example logging for Scala

Key package is `com.awsawbi.databrickslogging.initlog.appendlog`. This accepts two arguments, type of logging and message envelop itself.

```
%run "../shared/function/scala/loggingDriver"

// Scala Logging test
// Get full path of current notebook
val nbk = (dbutils.notebook.getContext.notebookPath).toString
// Adding Notebook path to error message
val msgW = "Warning originated from "+nbk
val msgT = "Trace originated from "+nbk
val msgD = "Debug originated from "+nbk
val msgI = "Info originated from "+nbk
val msgE = "Error originated from "+nbk

// Sending message to log analytics Types
//T ==> Trace
//D ==> Debug
//I ==> Info
//W ==> Warning
//E ==> Error
com.awsawbi.databrickslogging.initlog.appendlog("W", msgW)
com.awsawbi.databrickslogging.initlog.appendlog("T", msgT)
com.awsawbi.databrickslogging.initlog.appendlog("D", msgD)
com.awsawbi.databrickslogging.initlog.appendlog("I", msgI)
com.awsawbi.databrickslogging.initlog.appendlog("E", msgE)
```

This can be queried into Azure Log Analytics with following K-SQL

```
SparkLoggingEvent_CL
| project Message, TimeGenerated, logger_name_s, Level
| where logger_name_s == "com.awsawbi.databrickslogging.initlog"
| order by TimeGenerated desc
```

▶ Run

Time range: Last 4 hours

Save

Copy link

```

SparkLoggingEvent_CL
| project Message, TimeGenerated, logger_name_s, Level
| where logger_name_s == "com.awsawbi.databrickslogging.initlog"
| order by TimeGenerated desc

```

Completed. Showing results from the last 4 hours.

TABLE

> Warning originated from	2019-05-01T13:26:00.723	com.awsawbi.databrickslogging.initlog	WARN
> Error message from drvBook2.Cmd2	2019-05-01T13:16:31.019	com.awsawbi.databrickslogging.initlog	ERROR
> Warning message drvBook2.Cmd2	2019-05-01T13:16:31.018	com.awsawbi.databrickslogging.initlog	WARN
> Info message from drvBook2.Cmd2	2019-05-01T13:16:31.002	com.awsawbi.databrickslogging.initlog	INFO

Currently a scala package is placed under ../shared/function/scala/loggingDriver - this will be eventually part of master init script
